

ABSTRACT

A cable end connector assembly (1) includes an insulative housing (2), a number of electrical contacts (6) received in the insulative housing, a cable (4) electrically terminated with the electrical contacts, an insulative cover (3) assembled to the insulative housing, and a pull tab (5). The insulative cover includes a first face (316) engaging with the cable and an opposite second face (318). The pull tab is assembled to the cover and wraps the second face of the cover.
